ABSTRACT

In 1978, salvage logging in the Akamina-Kishinena watershed was proposed to control an infestation of mountain pine beetles. At that time logging was in progress in the adjacent Elder and Sage Creek drainages. Kishinena, Elder and Sage Creeks flow across the International Boundary and into the North Fork of the Flathead River. Because of the potential for adverse transboundary effects of logging, the Water Quality Branch, Inland Waters Directorate, undertook a water quality study of the Canadian portion of these streams. Water chemistry, suspended sediments, and periphytic algae were monitored in Akamina, Kishinena, Elder and Sage Creeks in 1979. Additional samples were collected in 1980 and 1982, after logging had begun in the Kishinena watershed.

This report presents the data from these collections and measurements.

RESUME

En 1978, la récupération du bois de coupe dans le bassin Akamina-Kishinena a été proposée afin de contrôler une épidémie de dendroctone du pin Ponderosa (Dendroctonus ponderosae, "mountain pine beetle"). A cette époque, l'abattage était déjà en cours dans les bassins adjacents des ruisseaux Elder et Sage. Ces derniers, ainsi que le Kishinena, traversent la frontière internationale pour se jeter dans le bras nord de la rivière Flathead. Comme cet abattage pouvait avoir des effets néfastes outre-frontière, la Direction de la qualité des eaux de la Direction générale des eaux intérieures a entrepris une étude de la qualité des eaux de la portion canadienne de ces cours d'eau. La chimie de l'eau, les particules en suspension et les algues périphytiques des ruisseaux Akamina, Kishinena, Elder et Sage ont été soumis à une surveillance continue en 1979. Des échantillons supplémentaires ont été recueillis en 1980 et en 1982, après que l'abattage ait commencé dans le bassin Kishinena.

Le présent rapport renferme les données recueillies dans le cadre de ce projet.

Introduction

In 1978 the British Columbia Forestry Service proposed salvage logging in the Akamina-Kishinena Valley to harvest stands of lodgepole pine (Pinus contorta var. latifolia Engelm.) infested with mountain pine beetles (Dendroctonus ponderosae Hopk.). Since Kishinena Creek, a tributary to the Flathead River, flows across the International Boundary into Glacier National Park, the United States Government expressed concern that the logging might impair the water quality in the park and in the North Fork of the Flathead River. Because of the potential effects of logging on transboundary waters, the Water Quality Branch, Inland Waters Directorate was asked to monitor water quality in the Akamina-Kishinena region.

This report presents hydrometric, chemical and biological data collected in 1978-1982 from the Akamina-Kishinena watershed and from two adjacent tributaries to the North Fork of the Flathead River.

Study Sites

Four study sites were chosen: Akamina Creek, in an area to be protected from logging, Kishinena Creek in an area scheduled for logging in 1979, and Elder and Sage Creeks whose watersheds had already been partially logged (Figure 1).

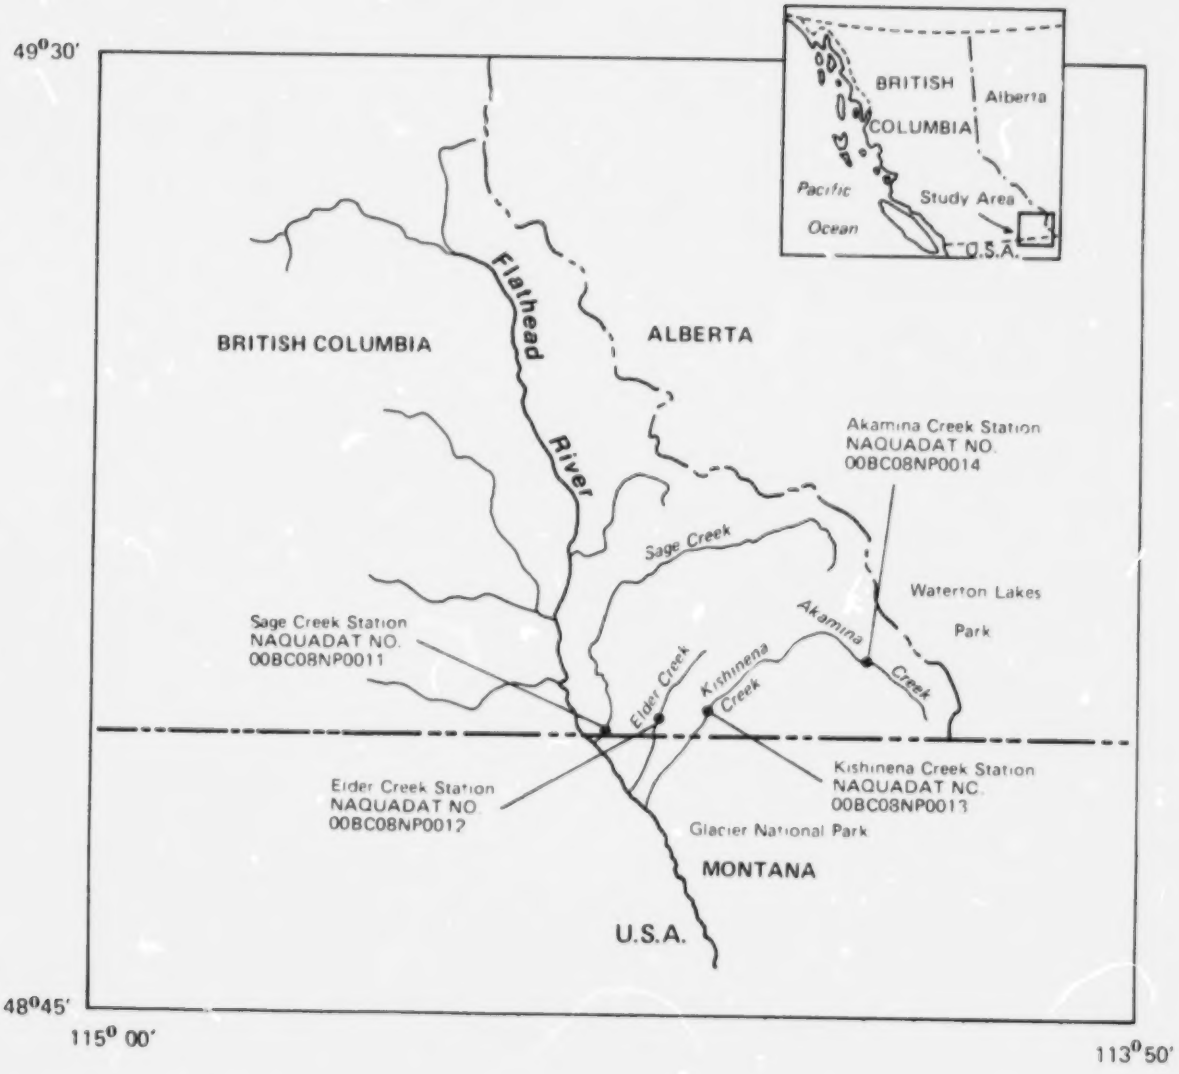

Fig. 1 Sample station locations and NAQUADAT station numbers in the eastern Flathead River Basin, British Columbia. Note that the upstream portion of Kishinena Creek is known as Akamina Creek.

Methods

Sampling Schedule

In all years, sampling was scheduled for the period of maximum algal abundance, while more intensive sampling in 1979 was designed to include pre-freshet, freshet and post-freshet periods.

Sampling and Analytical Methods

A complete description of hydrometric measurements and the collection and analysis of chemical and biological samples are presented in the interpretive report (Smith et al., 1985).

Descriptions of the methods may also be found in other sources. Stream discharge (Table 1) measurements are detailed by Braybrooks (1978). Water chemistry (Tables 3-12) analyses are described in the NAQUADAT Dictionary (Inland Waters Directorate, Water Quality Branch, 1983). The method for each chemical parameter may be identified by its NAQUADAT code number (Table 2). Analyses of suspended sediments and total dissolved solids (Tables 13 and 14) are described by Inland Waters Directorate, Water Survey of Canada (1981). In calculating descriptive statistics for analytical results, each value recorded as "less than detection limit" was substituted with the appropriate limit of detection. Methods of collection and analyses of algal samples from whole rocks (Tables 16-21) are detailed by Sheehan et al., (1980).

Diatom cell counts are not reported for qualitative samples, but the algal composition of the samples examined is tabulated in intervals of percent composition (i.e., <5%, 5-20%, >20%).

ACKNOWLEDGEMENTS

We are pleased to acknowledge the encouragement and support of Dr. W.E. Erlebach, Chief of the Water Quality Branch, Pacific and Yukon Region throughout all phases of this study.

We thank personnel from Water Resources Branch of Canada, particularly John Gilbert who provided hydrometric measurements and Carol Penner of the New Westminster Sediment Laboratory who analyzed water samples for suspended sediment. We are grateful to F.T.S. Mah and personnel of the Analytical Services Division, Water Quality Branch, Pacific and Yukon Region for precise and timely data. We are also grateful to Stewart Yee and Mary Bolin for algal identifications.

We are especially grateful to Dr. Simon Whitlow and Maureen Lamb of Water Quality Branch, Ottawa for formatting the chemical data. We express our thanks to Mary Lou Haines for typing the endless drafts of the report.

TABLE 3.

NAQUADAT Detailed and Summary Report
of Water Quality Data For Some Tributaries to the
North Fork of the Flathead River, 1978-1982

Values presented in this table are single measurements or means of replicates. Replicate values (when they exist) are presented in Tables 4 through 12.

When the same parameter has been processed or measured by different methods on different dates, all data are listed in one column, and the differences are indicated with back-up codes. For example, the sample for total dissolved nitrogen is either filtered in the field (07655) or not filtered (07651) prior to analysis.

07655		
Nitrogen		
Total		
Dissolved		
.051	51	(not filtered)
.058		(filtered)

Note: Although the detection limit for nonfilterable residues (10401 and 10501) is 10 mg/L (Table 2), the laboratory sometimes reports lower values, Caution is advised in interpreting values below 10 mg/L.

TABLE 17

A List of All Chrysophyta, Chlorophyta and Cyanophyta Species
Collected from the Akamina-Kishinena Watershed and
Adjacent Tributaries to the Flathead River, 1978-1982

Chrysophyta - Bacillariophyceae

Coscinodiscales

Cyclotella glomerata Bachm.
Cyclotella ocellata Pant.
Melosira granulata (Ehr.) Ralfs
Melosira varians Ag.

Fragilariales

Ceratoneis arcus (Ehr.) Kütz.
Ceratoneis arcus var. amphioxys (Rabh.) Brun
Diatoma elongatum Lyngb.
Diatoma hiemale (Lyngb.) Heib.
Diatoma hiemale var. quadratum (Kütz.) Ross
Diatoma vulgare Bory
Fragilaria capucina Desm.
Fragilaria construens (Ehr.) Grun.
Fragilaria construens var. binodis (Ehr.) Grun.
Fragilaria construens var. venter (Ehr.) Grun.
Fragilaria crotonensis Kitton
Fragilaria leptostauron (Ehr.) Hust.
Fragilaria vaucheriae (Kütz.) Peters.
Meridion circulare (Grev.) Ag.
Meridion circulare var. constrictum (Ralfs) V.H.
Synedra acus var. radians (Kütz.) Hust.
Synedra acus var. angustissima Grun.
Synedra rumpens var. fragilarioides Grun.
Synedra ulna (Nitz.) Ehr.
Synedra ulna var. oxyrhynchus (Kütz.) V.H.
Tabellaria fenestrata (Lyngb.) Kütz.
Tabellaria flocculosa (Roth.) Kütz.

Achnanthales

Achnanthes flexella (Kütz.) Brun.
Achnanthes lanceolata (Bréb.) Grun
Achnanthes microcephala (Kütz.) Grun.
Achnanthes minutissima Kütz.
Achnanthes sp.
Cocconeis placentula Ehr.
Rhoicosphenia curvata (Kütz.) Grun.

TABLE 17 (Continued)

Naviculales

Amphipleura pellucida (Kütz.) Kütz.
Amphora coffeaeformis (Ag.) Kütz.
Amphora ovalis (Kütz.) Kütz.
Amphora sp.
Anomoeneis exilis (Kütz.) Cl.
Cymbella affinis Kütz.
Cymbella caespitosa (Kütz.) Brun
Cymbella cistula (Hempr.) Kirchn.
Cymbella mexicana (Ehr.) Cl.
Cymbella prostrata (Berk.) Cl.
Cymbella sinuata Greg.
Cymbella turgida Greg.
Cymbella ventricosa (Kütz.) Kütz.
Cymbella sp.
Diploneis decipiens Cl.-Eu.
Frustulia rhomboides (Ehr.) DT
Gomphonema geminatum (Lyngb.) Ag.
Gomphonema herculeanum Ehr.
Gomphonema intricatum Kütz.
Gomphonema lanceolatum Ehr.
Gomphonema olivaceoides var. densestriata Hust.
Gomphonema olivaceum (Lyngb.) Kütz.
Gomphonema parvulum (Kütz.) Kütz.
Gomphonema sp.
Gyrosigma sciotense (Sulliv. & Wormley)
Navicula arvensis Hust.
Navicula bicephala Hust.
Navicula pelliculosa Hilse
Navicula radiosa Kütz.
Navicula salinarum var. intermedia (Grun.) Cl.
Navicula scutelloides W. Sm. ex Greg.
Navicula tripunctata (O.F. Müll.)
Navicula viridula (Kütz.) Ehr.
Navicula sp. B
Navicula sp.
Neidium sp.
Pinnularia sp.
Stauroneis anceps Ehr.
Stauroneis sp.

TABLE 17 (Continued)

Surirellinees

Denticula elegans Kütz.
Epithemia sorex Kütz.
Epithemia turgida (Ehr.) Kütz.
Nitzschia acicularis (Kütz.) W. Sm.
Nitzschia dissipata (Kütz.) Grun.
Nitzschia frustulum (Kütz.) Grun.
Nitzschia hantzschiana Rabh.
Nitzschia linearis W. Sm.
Nitzschia palea (Kütz.) W. Sm.
Nitzschia sp.
Surirella angustata Kütz.

Chrysophyta - Chrysophyceae

Hydrurus foetidus (Vill.) Trev.
Unidentified Species

Chlorophyta

Closterium sp.
Cosmarium sp.
Microspora sp.
Mougeotia sp.
Oedogonium sp.
Spirogyra sp.
Stigeoclonium sp.
Ulothrix zonata (Weber & Mohr) Kütz.
Ulothrix sp.
Zygnema sp.
Unidentified filamentous
Unidentified unicellular

Cyanophyta

Gloeotrichia sp.
Lyngbya sp.
Merismopedia sp.
Oscillatoria sp. A
Oscillatoria sp. B
Oscillatoria sp.
Nostoc verrucosum Vauch.
Spirulina sp.

TABLE 18

Percent Composition (by volume) of Periphyton in Qualitative Samples Collected from some Tributaries to the North Fork of the Flathead River, August 16, 1978

* denotes that the algal group or species made up < 5% of total algal volume examined
** denotes that the algal group or species made up 5-20% of total algal volume examined
*** denotes that the algal group or species made up >20% of total algal volume examined

TABLE 19

Percent Composition (by volume) of Diatom and Non-Diatom Periphyton collected from the Akamina-Kishinena Watershed and Adjacent Tributaries to the Flathead River 1979-1982

Algal composition of qualitative samples is reported in intervals of percent composition (by volume) as follows:

\+ denotes that the algal group or species made up < 5% of total algal volume examined
++ denotes that the algal group or species made up 5-20% of total algal volume examined
+++ denotes that the algal group or species made up >20% of total algal volume examined

TABLE 21

Percent Numeric Composition of Periphytic Diatoms Collected From Some Tributaries to the North Fork of the Flathead River, 1979-1982

Diatom composition of qualitative samples is reported in intervals of percent composition, as follows:

\+ denotes that number of cells was < 5% of total cells enumerated
++ denotes that number of cells was 5-20% of total cells enumerated
+++ denotes that number of cells was > 20% of total cells enumerated
